Ceramic Tire Shiner Spray

Weicar Ceramic Tire Polish Spray; Its advanced SiO2 (Ceramic) formulation provides a long-lasting, deep black and glossy appearance on the tire surface. By penetrating the rubber fiber, it creates a hydrophobic protective layer that offers high resistance to UV rays, road grime, and water. Regular use prevents tires from drying out, cracking, and fading in the sun, maintaining their like-new appearance for a long time.

Areas of Use: It is designed for use only on the sidewalls (lateral surfaces) of tires on all types of vehicles, including cars, motorcycles, light commercial vehicles, and heavy vehicles.

Net Weight	342gr
Gross Weight	430gr
Volume	500ml
Package	24pcs
Pallet	1920pcs
Pallet Dim	100x120x215h
Shape	Aerosol Can
Barcode(EAN)	0700343203778

Directions for Use: Before application, wash your tires, remove mud and dirt, and allow them to dry completely. Shake the bottle before use. Spray the product evenly onto the tire sidewall and distribute it evenly using an application sponge. Allow the product to dry for 5-10 minutes to form a ceramic bond. For a deeper shine and longer-lasting protection, you can safely apply a second coat after the first coat has dried.

Technical Note: Never allow the product to come into contact with the tire tread, rims, or brake discs. In case of accidental contact with a rim or brake disc, wipe immediately with a clean, dry cloth.

Hazard Pictograms:

Storage Conditions: Store in cool and ventilated area. Recommended storage temperature: 15 - 30 °C. Keep out of reach of children.
